SUMMARY

Software Engineer Intern at Honeywell with a B.E. in Information Science, building full-stack, AI-driven DevSecOps platforms in React/TypeScript, Python/FastAPI, PostgreSQL, and Azure — with RAG, CI/CD automation, and secure REST APIs.

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, TypeScript, SQL

Frontend: React, Next.js, Tailwind CSS, Zustand, TanStack Query, Recharts, Vite

Backend & APIs: FastAPI, Node.js, SQLAlchemy (async), Pydantic, REST APIs, SSE

Databases & DevOps: PostgreSQL, Redis, Docker, Kubernetes, GitHub Actions, Prometheus, Nginx, Ansible, Azure

Security & Practices: DevSecOps, CI/CD, SSO/OAuth2, JWT, RBAC, SAST/SCA, OWASP, Policy-as-Code, TDD

AI/ML & Data: LLMs, RAG, LangChain, GPT-4o, Scikit-learn, NetworkX, Pandas, Machine Learning

EXPERIENCE

Honeywell Technologies

Jan 2026 – Jul 2026

Software Engineer Intern

Bengaluru, India

AI-Powered NHI Governance Platform — Python, LangChain, GPT-4o, React, Azure

- Engineered a DevSecOps platform that auto-discovers and risk-scores non-human identities (GitHub PATs, deploy keys, Azure service principals, SSL/TLS certs) via modular Python agents with a deterministic 0–100 engine and 7-rule policy-as-code.
- Orchestrated GPT-4o risk rationale through a LangChain tool-calling agent and automated CI/CD security gates (SAST/Coverity, SCA/Black Duck) with Slack, Jira, and email alerting.

DevSecOps SRE & Engineering-Intelligence Platform — React, TypeScript, FastAPI, PostgreSQL

- Architected a full-stack platform (4 React/TypeScript SPAs, 2 async FastAPI backends, 200+ REST endpoints across 24 routers) with a runner-to-host correlation engine monitoring 400+ CI/CD runners across ~359 hosts.
- Delivered a stateful alerting engine and SSO with deny-by-default RBAC (7 roles), plus a config-driven ETL unifying 5 vendor tools (Coverity, Black Duck, SonarQube, GitHub) into a multi-schema PostgreSQL store.

AI Dependency-Intelligence Assistant (RAG) — FastAPI, Next.js, NetworkX, Azure OpenAI

- Developed a hybrid Retrieval-Augmented Generation (RAG) assistant over a 1,000+ package dependency graph, grounding every answer in a deterministic NetworkX engine so the LLM only phrases results—eliminating hallucination.
- Shipped a streaming Next.js chat interface with interactive graph visualizations, secured by SSO/JWT, reaching 100% correctness on a 77-case test suite at 0.26 s average latency.

PROJECTS

AI-Based Web Application Firewall — Python, FastAPI, React, Scikit-learn

2025

- Built an ML and rule-based WAF detecting SQL-injection, XSS, and command-injection at 95% accuracy, with a real-time inference pipeline, threat-analytics dashboard, rate limiting, and IP allow/deny lists.

AI-Powered Sign Language to Speech Converter — ESP32, FastAPI, React

2025

- Built an IoT glove (5 flex sensors + 6-axis IMU) with a Random Forest model at 92.4% accuracy and <40 ms latency across all 26 ASL alphabets, served via FastAPI with a React text-to-speech interface.

EDUCATION

R. V. College of Engineering

2022 – 2026

B.E. in Information Science and Engineering — CGPA: 8.54/10

Bengaluru, India

MES PU College

2020 – 2022

Pre-University (Class XII) — 94.33%

Sirsi, India

ACHIEVEMENTS & CERTIFICATIONS

- Honeywell STAR Award — “Drive Accountability Culture” (2026):** recognized for ownership in delivering a GenAI-based security and runner-monitoring solution advancing to production.
- National-Level INSPIRE Award (2016):** selected participant for innovative project development.
- Certifications:** Infosys Springboard — OS Fundamentals — Udemy — DSA (C/C++).
